

Esa Prisma 140

Technical data

rev. 2021.05

Product code: **EPP**

Esa Prisma is a complex system specifically designed for lighting large spaces. The conical support is made of steel without visible welds. The individual modules, arranged in a circle on a steel crown with a clean and minimalist design, allow the light beam to be directed thanks to the 180° adjustment.

CONFORMITY

MATERIALS

Pole:	Steel S355 - Hot Galvanized UNI EN 10219 - EN1461
Weight:	Flange 170Kg 374lb Foundation 174kg 383lb
Colour:	GMR Light

TERMINAL BLOCK 4x16MM²

Smooth fitting door

LIGHTING FIXTURE: ESA

See dedicated datasheet

ANCHORAGE TYPE

⊕ Flange

⊕ Foundation

AVAILABLE CONFIGURATIONS

EPP140_EPM18

EPP140_EPM24

Esa Prisma 140

Protection cycles

GMR ENLIGHTS works with cast iron, steel and aluminum. The materials are selected and processed to maximize performance and quality.

GALVANIZED STEEL

Protection of galvanized steel surfaces for poles

The protection of galvanized steel elements is achieved by following steps:

- Micro sandblasting;
- First epoxy layer application followed by: Wilting > Drying > Cooling;
- Acrylic glaze layer application followed by: Wilting > Drying > Cooling;
- Packing at least after 24-hour-drying at room temperature.

Protection of galvanized steel surfaces for brackets and pastorals

The protection of the galvanized steel elements is achieved thanks to:

- Micro sandblasting;
- Phosphoric pickling bath at a pH level ranging from 1.5 to 3;
- Rinsing with demineralised water;
- First powder layer application;
- Kiln firing;
- Application of a final powder layer;
- Kiln roasting of the final powder layer at 180°C (356°F);
- Cooling.

CAST IRON

Protection of cast iron surfaces for bases

The protection of cast iron elements is achieved by the following treatments:

- Surface micro shotblasting;
- Mono-component dip galvanizing followed by: Wilting > Drying > Cooling;
- Epoxy micaceous primer application followed by: Wilting > Drying > Cooling;
- Acrylic enamel application followed by: Wilting > Drying > Cooling;
- Packing at least after 24-hour-drying at room temperature.

DIE-CAST ALUMINIUM

Protection of die-cast aluminium surfaces for lighting fixtures, tops, collars, brackets and pastorals

Lighting fixtures, brackets, pastoral, and die-cast accessories undergo a cycle of powder painting which creates a barrier against the corrosion of metal parts. Moreover this barrier makes the finished product comply with design specifications in terms of surface roughness, color and reflectance.

The cycle consists of the following steps:

- Micro sandblasting;
- Hot pickling bath in a zinc-based phosphodegreasing solution;
- Specific process for the preparation of surfaces before painting;
- Washing with water;
- Rinsing with demineralised water and subsequent drying;
- First powder layer application followed by kiln baking at 180°C (356°F);
- Final powder layer application using a High Durability product and final kiln roasting at 180°C (356°F).

Salt spray test

The top quality of such treatments is confirmed by salt spray tests performed in accordance with standard ISO 9227:2017 Neutral Salt Spray test (NSS). The test was carried out for 8.000 hours at 35°C (95°F) and demonstrated through the report test released.
